

BioFem™ Transition

**Black Cohosh
Diosgenin
DHEA**

INNOVATIVE INGREDIENTS. CLINICAL FORMULATIONS.

Menopause can have profound effects on comfort and quality of life, particularly related to vasomotor response, memory, focus, sleep, mood, and skin appearance. Cardiovascular and bone health are also important considerations in aging women.

Black cohosh is a traditional women's herb that may help support healthy climacteric balance related to menopause. Black cohosh may also support cardiovascular health by supporting healthy vascular elasticity and bone strength by supporting normal osteoblast activity.

The flavonoid 8-prenylnaringenin may bind to both alpha- and beta-estrogen receptors. ER α is present in bone and reproductive tissue, while ER β plays a role in the immune system. Both estrogen receptor types are found in significant levels in the cardiovascular and CNS systems.

Pregnenolone is a neurosteroid precursor to cortisol, DHEA and progesterone. DHEA is a steroid hormone that has been called the "mother hormone" since it is a precursor to estrogens and androgens. It decreases with age and may be correlated with bone strength and cardiovascular health.

Product #: 91646

Size: 60ct

SRP: \$50.69

BIOFEM TRANSITION CAN HELP SUPPORT:

- Vasomotor comfort during menopause/perimenopause*
- Bone strength and cardiovascular health*
- Balanced mood and positive outlook*
